

YORK ACADEMY REGIONAL CHARTER SCHOOL

Addition and renovation of existing historic industrial facility to repurpose for use as a school.

Description of structural features:

This project links six different structures through an infill addition. The structures range in age from the mid 1800's through the 1960's. The entire project from design through construction will be completed in less than 12-months. CEG is responsible for the structural design. The project required retention of the historic heavy timber framing in the main buildings, as well as selective demolition and reinforcing of other portions of the structure. The various buildings required modifications to align non-matching floor elevations and selective underpinning and shoring to allow for the construction of infill areas.

Location: York, PA

Cost: \$8,000,000

Completion: 2011

Owner: York Academy Regional Charter School

Contact: Dr. Dennis Baughman
